Proposal validity	90 calendar days from submission

Executive Summary

Apex proposes a highly configurable procurement platform built on a modular microservices architecture. The solution is the most technically extensive of the bids, with event-based integration, configurable workflow orchestration and a dedicated India hosting region. It is aimed at a buyer seeking extensibility and control rather than the lowest three-year cost. The proposed production cutover is 18 weeks, two weeks later than the planning baseline, because Apex includes a controlled migration rehearsal and SAP integration certification tests.

Important note: This document is fictional, created solely for testing a classroom RFP evaluation application. Supplier names, contacts, certifications, customer references, performance claims and commercial amounts are synthetic and must not be treated as real-world claims.

1. Technical Capability and Solution Fit

1.1 Proposed architecture

Apex Procurement Cloud uses separately deployable services for supplier master, sourcing events, document management, approvals, analytics and notification. Services run in managed Kubernetes across three availability zones in an India cloud region. PostgreSQL stores transactional data; object storage retains documents with versioning; an event bus handles asynchronous updates. The supplier portal supports browser and mobile-responsive access. The bidder states that its standard tenant has passed a 2,000-user load test at 150 concurrent sessions, with a measured 95th-percentile response time of 1.8 seconds for standard list views.

1.2 Integration approach

Apex provides a maintained SAP S/4HANA connector using released APIs for supplier and purchase-order synchronisation. The proposal includes Entra ID SAML/OIDC SSO, SCIM provisioning and Microsoft 365 notifications. A sandbox and mapping workshop are included. Complex legacy fields and custom SAP extensions are excluded pending discovery. The integration team will run reconciliation reports for the first 30 days after cutover.

1.3 Functional scope

Configurable onboarding with mandatory-document rules; RFQ templates and sealed bid response windows; weighted scorecards; four-level approval routing; contract versioning and expiry alerts; supplier corrective-action plans; and dashboards for spend by category, supplier concentration, RFQ cycle time and document expiry. Audit exports include actor, timestamp, before/after values and source IP. Workflow changes are version-controlled and can be promoted from test to production.

1.4 Buyer environment and common scope

The response is made against the same Northstar requirements supplied to all bidders:

- **Buyer and programme:** Northstar Manufacturing Group (fictional) operates four manufacturing plants and three regional offices in India. The programme covers approximately 1,200 employees, 500 potential platform users and 180 active suppliers.
- **Required workflows:** Supplier registration and onboarding; document collection and due diligence; RFQ creation and supplier responses; configurable evaluation scorecards; multi-level approvals; contract and certificate repository; supplier performance reviews; and spend / sourcing dashboards.
- **Enterprise environment:** The buyer currently uses SAP S/4HANA for finance and purchasing, Microsoft Entra ID for identity, and Microsoft 365 for collaboration. REST APIs, SSO and role-based access are expected. CSV exchange may be used only as a documented interim workaround.
- **Security and resilience expectations:** The buyer expects MFA, encryption in transit and at rest, audit trails, vulnerability management, independent security testing, India data-residency clarity, a documented incident process, 99.9% monthly availability, target RTO of four hours and target RPO of one hour.

2. Implementation Plan and Commercial Proposal

2.1 Delivery plan and milestones

Apex proposes an 18-week delivery. Weeks 1-2: discovery and solution design. Weeks 3-5: tenant setup, identity and core data model. Weeks 6-9: supplier onboarding, RFQ and approvals configuration. Weeks 10-12: SAP and Microsoft integrations. Weeks 13-14: migration rehearsal and user acceptance testing. Weeks 15-16: training and pilot with 25 suppliers. Weeks 17-18: production rollout and hypercare. The buyer must provide SAP test credentials, clean supplier master data and named process owners by week 2.

Milestone	Evidence / exit condition
Design approval	Signed solution design, scope and responsibility matrix
Configuration complete	Configured workflows, roles and supplier forms available in test
Integration and migration	Interface test evidence and reconciled migration totals
User acceptance	Buyer-approved test results and defect disposition
Go-live	Cutover checklist, training completion and support handover

2.2 Commercial schedule (INR, excluding GST)

Cost component	Amount
One-time implementation and configuration	INR 24,00,000
Integration package (SAP + Entra ID + M365)	INR 9,00,000
Annual subscription (500 named users)	INR 29,00,000
Annual premium support	INR 4,00,000
Year 1 total before taxes	INR 66,00,000
Three-year total before taxes	INR 1,32,00,000

The three-year total assumes annual subscription and premium support remain flat. Storage above 2 TB is INR 1,20,000 per additional TB per year. Additional custom SAP objects are charged at INR 18,000 per consultant day after written approval. GST is extra. Payment terms are 30% on signature, 30% on design approval, 30% at UAT sign-off and 10% at go-live.

2.3 Commercial assumptions and exclusions

The price includes up to 2 TB document storage, two non-production environments and 500 named users. Buyer supplies Microsoft and SAP licences. Historical documents are migrated as PDFs and metadata; OCR correction of low-quality scans is excluded. All prices are exclusive of GST.

3. Security, Compliance, Support and Delivery Risks

3.1 Information security and compliance

Apex states that its operating entity holds ISO/IEC 27001:2022 certification (certificate reference APX-ISMS-2025-118; valid through 30 June 2028) and provides a SOC 2 Type II report under NDA. TLS 1.2+ is used in transit and AES-256 at rest. MFA is mandatory for administrators and configurable for suppliers. Production access is logged and reviewed quarterly. Independent penetration testing was completed in May 2026; the executive summary is available during due diligence. Customer data is hosted in Mumbai and Hyderabad regions with encrypted cross-zone backups. The contract offers breach notification within 24 hours of confirmation.

3.2 Availability, backup and disaster recovery

The standard service commitment is 99.9% monthly uptime, excluding scheduled maintenance. Stated recovery targets are RTO four hours and RPO one hour. Backups run every four hours with a daily immutable copy retained for 35 days. A disaster recovery exercise was completed in February 2026; a redacted report can be shared under NDA.

3.3 Support model and service levels

Premium support provides 24x7 coverage for P1 incidents, 8x5 coverage for other tickets, a named service manager and quarterly service reviews. P1 acknowledgement is 30 minutes and target restoration is four hours. P2 acknowledgement is four business hours. Hypercare includes a daily triage call for the first two weeks. Training includes six administrator sessions and four end-user webinars.

3.4 Key risks and dependencies

The longer 18-week schedule depends on timely SAP sandbox access and buyer data cleansing. Advanced workflow changes may require specialist configuration. The three-year cost is materially above the lower-priced bids. Apex recommends locking the first-release scope before build to protect the timeline.

3.5 Relevant customer experience and references

Reference A: Meridian Auto Components (fictional), 900 users, SAP S/4HANA integration, live since 2024. Reference B: Westlake Industrial Pumps (fictional), 1,600 users, supplier portal and sourcing workflows, live since 2023. Named contacts and reference calls are available after mutual NDA.

4. Closing Statement

Apex Systems appreciates the opportunity to respond to RFP-2026-041. The statements in this proposal are submitted for evaluation against the buyer's requirements and are subject to contract, final design validation and mutually agreed acceptance criteria.
