SUPPLIER PROPOSAL | RESPONSE TO RFP-2026-041

Enterprise Procurement & Supplier Management Platform

Submitted to Northstar Manufacturing Group

NexaWorks Digital Private Limited

Technical, Implementation, Commercial and Service Response

Proposal reference	NWD-26-119
Submission date	21 October 2026
Primary contact	Priya Nair, Head of Enterprise Accounts
Email	tenders@nexaworks.example
Telephone	+91 80 4200 3300
Proposal validity	90 calendar days from submission

Executive Summary

NexaWorks proposes a balanced, product-led procurement platform with standard supplier lifecycle, sourcing and performance capabilities. It combines a practical implementation plan with documented integration patterns and a mature support model. The bid is not the least expensive, but most of the requested capabilities are included in the base scope. NexaWorks commits to a 15-week phased rollout, with named buyer dependencies and measurable acceptance criteria.

Important note: This document is fictional, created solely for testing a classroom RFP evaluation application. Supplier names, contacts, certifications, customer references, performance claims and commercial amounts are synthetic and must not be treated as real-world claims.

1. Technical Capability and Solution Fit

1.1 Proposed architecture

NexaProcure is a cloud-native application using independently scaled services for identity, supplier onboarding, sourcing, workflow, document storage and reporting. Managed PostgreSQL stores transactional records and encrypted object storage holds documents. The service runs across two availability zones in an India region. A queue-based integration worker supports retry and dead-letter handling. The bidder reports a 1,000-user test with 200 concurrent sessions and 95th-percentile page response below 2.2 seconds for standard workflows. The product supports 500 users and 180 suppliers in the quoted tier.

1.2 Integration approach

The included SAP S/4HANA connector supports supplier creation/update, purchase-order reference and status synchronisation through APIs. Entra ID SSO supports SAML 2.0 and OIDC, with group-based roles and SCIM provisioning. Microsoft 365 integration covers Outlook notifications and SharePoint document links. Failed integrations appear in an operations console with retry history and reconciliation status. Custom SAP fields are handled through a jointly approved mapping specification; extensive SAP customisation is excluded.

1.3 Functional scope

Supplier registration with approval gates; configurable document and certificate expiry rules; RFQ templates, addenda and sealed submissions; weighted supplier scorecards; configurable multi-stage approvals; contract repository with version and renewal alerts; supplier performance reviews and corrective actions; and dashboards covering category spend, cycle time, supplier risk and compliance status. Audit events include actor, timestamp, source, action and changed fields. The platform exports structured CSV and JSON for audit and analytics.

1.4 Buyer environment and common scope

The response is made against the same Northstar requirements supplied to all bidders:

- **Buyer and programme:** Northstar Manufacturing Group (fictional) operates four manufacturing plants and three regional offices in India. The programme covers approximately 1,200 employees, 500 potential platform users and 180 active suppliers.
- **Required workflows:** Supplier registration and onboarding; document collection and due diligence; RFQ creation and supplier responses; configurable evaluation scorecards; multi-level approvals; contract and certificate repository; supplier performance reviews; and spend / sourcing dashboards.
- **Enterprise environment:** The buyer currently uses SAP S/4HANA for finance and purchasing, Microsoft Entra ID for identity, and Microsoft 365 for collaboration. REST APIs, SSO and role-based access are expected. CSV exchange may be used only as a documented interim workaround.
- **Security and resilience expectations:** The buyer expects MFA, encryption in transit and at rest, audit trails, vulnerability management, independent security testing, India data-residency clarity, a documented incident process, 99.9% monthly availability, target RTO of four hours and target RPO of one hour.

2. Implementation Plan and Commercial Proposal

2.1 Delivery plan and milestones

The 15-week plan is: weeks 1-2 discovery, fit-gap and design sign-off; weeks 3-4 tenant, roles and identity configuration; weeks 5-7 supplier onboarding and document rules; weeks 8-9 RFQ, evaluation and approval workflows; weeks 10-11 SAP and Microsoft integrations; week 12 data migration and reconciliation; week 13 UAT and security testing; week 14 training and pilot with 30 suppliers; week 15 production cutover. Acceptance requires 95% of agreed test cases passed, no open critical defects and signed data reconciliation. A two-week hypercare window follows launch.

Milestone	Evidence / exit condition
Design approval	Signed solution design, scope and responsibility matrix
Configuration complete	Configured workflows, roles and supplier forms available in test
Integration and migration	Interface test evidence and reconciled migration totals
User acceptance	Buyer-approved test results and defect disposition
Go-live	Cutover checklist, training completion and support handover

2.2 Commercial schedule (INR, excluding GST)

Cost component	Amount
One-time implementation and migration	INR 15,00,000
SAP + Entra ID + Microsoft 365 integration	INR 6,00,000
Annual subscription (500 users)	INR 22,00,000
Annual enhanced support	INR 3,00,000
Year 1 total before taxes	INR 46,00,000
Three-year total before taxes	INR 96,00,000

The three-year total assumes flat annual subscription and support. It includes 1 TB document storage, two test environments, standard product upgrades and 40 hours of post-launch configuration support per year. Extra storage is INR 90,000 per TB per year. Bespoke development is INR 15,000 per consultant day after approval. GST is extra. Payment terms are 20% on signature, 20% after design, 30% at UAT, 20% at go-live and 10% after hypercare.

2.3 Commercial assumptions and exclusions

The price includes one production tenant, two non-production tenants, 500 named users and 1 TB storage. Buyer provides SAP and Microsoft licences and one test environment. Migration covers active supplier master data and up to 20,000 current documents. GST is extra; annual fees are billed in advance.

3. Security, Compliance, Support and Delivery Risks

3.1 Information security and compliance

NexaWorks states that its ISMS is certified to ISO/IEC 27001:2022 (certificate NXW-ISMS-2024-044; stated expiry 12 December 2027). A SOC 2 Type II report covering the hosting and application operations period ending March 2026 is available under NDA. Data is hosted in Mumbai, with encrypted backups in a second India region. TLS 1.2+ and AES-256 at rest are used. MFA is enforced for privileged users and supported for all users. Role-based access, quarterly access reviews, centralised logging, annual penetration tests and a documented vulnerability remediation process are included. The latest independent penetration test was completed in April 2026; no unresolved critical findings are reported by the bidder.

3.2 Availability, backup and disaster recovery

NexaWorks commits to 99.9% monthly uptime. The service target is RTO four hours and RPO one hour. Database backups run hourly, with daily immutable backups retained for 35 days. A recovery exercise was completed in January 2026, and a summary report is available under NDA. Planned maintenance is notified at least seven days in advance except for urgent security work.

3.3 Support model and service levels

Enhanced support includes 24x7 P1 intake, 8x5 IST coverage for P2-P4, a named service delivery manager and monthly service reporting during the first quarter. P1 response is 30 minutes with a four-hour restoration target; P2 response is two business hours. The first two weeks after launch include daily triage. Training includes role-based administrator workshops, buyer champion sessions, supplier onboarding guides and recorded quick-start videos.

3.4 Key risks and dependencies

The 15-week timeline is achievable only if the SAP sandbox and buyer process owners are available by week 2. Complex legacy data may require cleansing beyond the included migration allowance. The solution uses configurable standard workflows; bespoke user-interface changes are subject to change control. A small number of advanced analytics features are planned for a later product release and are not required for the proposed launch.

3.5 Relevant customer experience and references

Reference A: Trident Precision Manufacturing (fictional), 1,100 users, SAP S/4HANA integration and supplier lifecycle, live since 2024. Reference B: BluePeak Foods India (fictional), 650 users, sourcing, onboarding and scorecards, live since 2023. Reference C: Orion Components Group (fictional), 2,000 users, phased multi-site deployment, live since 2025. Reference calls can be arranged with permission.

4. Closing Statement

NexaWorks appreciates the opportunity to respond to RFP-2026-041. The statements in this proposal are submitted for evaluation against the buyer's requirements and are subject to contract, final design validation and mutually agreed acceptance criteria.
