SUPPLIER PROPOSAL | RESPONSE TO RFP-2026-041

Enterprise Procurement & Supplier Management Platform

Submitted to Northstar Manufacturing Group

Orbit Digital Solutions Limited

Technical, Implementation, Commercial and Service Response

Proposal reference	ODS-26-063
Submission date	19 October 2026
Primary contact	Sanjay Kulkarni, Vice President - Client Solutions
Email	rfpdesk@orbitdigital.example
Telephone	+91 80 4300 4400
Proposal validity	90 calendar days from submission

Executive Summary

Orbit Digital is an established business software services provider with a long record of delivering supplier portals and procurement workflow projects. Its proposal emphasises delivery experience, broad functional coverage and a competitive subscription. However, the proposed product combines older application components and relies on scheduled file exchange for several integrations. The bidder offers a 16-week implementation, but some integration and audit capabilities depend on customisation after discovery.

Important note: This document is fictional, created solely for testing a classroom RFP evaluation application. Supplier names, contacts, certifications, customer references, performance claims and commercial amounts are synthetic and must not be treated as real-world claims.

1. Technical Capability and Solution Fit

1.1 Proposed architecture

Orbit SupplierSphere is a three-tier web application comprising a presentation layer, a central business logic service and a relational database. The bidder proposes deployment on a managed virtual-machine environment in India. Documents are stored in an attached object store. The current product uses scheduled jobs for reporting and integration rather than event-driven processing. Orbit reports deployments with up to 700 named users but did not include concurrency or response-time test results. Horizontal scaling is possible by adding application nodes; database scaling is primarily vertical.

1.2 Integration approach

A standard SAP supplier master export/import template is provided. The quoted solution uses nightly SFTP CSV exchange for supplier and purchase-order references. A real-time SAP API connector can be built as a separate change request after technical discovery; no fixed price is included. Entra ID integration is supported through SAML, but SCIM provisioning is not available in the current release. Microsoft 365 integration is limited to SMTP notifications and downloadable reports.

1.3 Functional scope

Supplier registration, document repository, RFQ issue and response, bid comparison, configurable approval chains, contract attachment storage, supplier review forms and operational dashboards. The workflow engine supports up to five approval stages. The current audit facility records login, document upload and workflow completion events; comprehensive field-level history requires a custom module. Supplier risk scoring is a manual checklist. The bidder proposes to configure buyer-specific reports during implementation.

1.4 Buyer environment and common scope

The response is made against the same Northstar requirements supplied to all bidders:

- **Buyer and programme:** Northstar Manufacturing Group (fictional) operates four manufacturing plants and three regional offices in India. The programme covers approximately 1,200 employees, 500 potential platform users and 180 active suppliers.
- **Required workflows:** Supplier registration and onboarding; document collection and due diligence; RFQ creation and supplier responses; configurable evaluation scorecards; multi-level approvals; contract and certificate repository; supplier performance reviews; and spend / sourcing dashboards.
- **Enterprise environment:** The buyer currently uses SAP S/4HANA for finance and purchasing, Microsoft Entra ID for identity, and Microsoft 365 for collaboration. REST APIs, SSO and role-based access are expected. CSV exchange may be used only as a documented interim workaround.
- **Security and resilience expectations:** The buyer expects MFA, encryption in transit and at rest, audit trails, vulnerability management, independent security testing, India data-residency clarity, a documented incident process, 99.9% monthly availability, target RTO of four hours and target RPO of one hour.

2. Implementation Plan and Commercial Proposal

2.1 Delivery plan and milestones

Orbit proposes 16 weeks. Weeks 1-3: requirement confirmation and solution blueprint. Weeks 4-6: environment setup, master-data configuration and templates. Weeks 7-9: workflow and RFQ configuration. Weeks 10-12: SAP file exchange, SSO and reports. Weeks 13-14: migration and UAT. Week 15: training and pilot. Week 16: go-live. The schedule assumes no custom API integration and no major changes to the standard data model. Any real-time integration or field-level audit work will be separately planned.

Milestone	Evidence / exit condition
Design approval	Signed solution design, scope and responsibility matrix
Configuration complete	Configured workflows, roles and supplier forms available in test
Integration and migration	Interface test evidence and reconciled migration totals
User acceptance	Buyer-approved test results and defect disposition
Go-live	Cutover checklist, training completion and support handover

2.2 Commercial schedule (INR, excluding GST)

Cost component	Amount
One-time implementation and configuration	INR 13,00,000
Standard file integration package	INR 3,00,000
Annual subscription (500 users)	INR 19,00,000
Annual support package	INR 2,00,000
Year 1 total before taxes	INR 37,00,000
Three-year total before taxes	INR 79,00,000

The three-year total includes standard upgrades and 8x5 support. Real-time SAP API integration is estimated at INR 8,00,000-12,00,000 after discovery. Field-level audit customisation is estimated at INR 4,00,000. Extra storage above 1 TB is INR 75,000 per TB per year. GST is extra. Payment terms are 40% on order, 30% at UAT and 30% at go-live.

2.3 Commercial assumptions and exclusions

The quote includes standard workflows, 500 users and 1 TB storage. Buyer accepts nightly SFTP exchange for the first release. Real-time API integration, full field-level audit and advanced risk analytics are excluded. All prices are exclusive of GST.

3. Security, Compliance, Support and Delivery Risks

3.1 Information security and compliance

Orbit states that its parent group held ISO 27001:2013 certification; the certificate supplied with the bid expired in August 2025, and renewal evidence was not attached. Orbit has not supplied a SOC 2 report. The proposed hosting provider supports encryption at rest and TLS in transit; Orbit will confirm the exact encryption configuration during design. MFA is available for administrators but is optional for standard users. The bidder performs annual vulnerability scans; the latest independent penetration-test summary was not included. The proposal does not identify a committed incident-notification period or provide a contractual data-residency clause.

3.2 Availability, backup and disaster recovery

Orbit proposes 99.7% monthly availability. Database backups run nightly and are retained for 30 days. The bidder has stated an indicative RTO of eight hours and RPO of 24 hours, subject to confirmation in the final service schedule. A disaster recovery exercise is described as having taken place in 2025, but no report or measured recovery result was attached.

3.3 Support model and service levels

The standard package provides 8x5 IST support by ticket and phone. A 24x7 emergency escalation number is available for complete service outage, but the commercial schedule does not identify a separate P1 response target. General ticket acknowledgement is within one business day. A named account manager and quarterly review are included. Two administrator training sessions and one train-the-trainer workshop are included.

3.4 Key risks and dependencies

Current security certification evidence is expired or incomplete. The 16-week schedule depends on retaining file-based SAP integration; API integration would add cost and may affect timing. Field-level audit history is not part of the standard release. The application has less evidence of high-concurrency performance than some competing bids.

3.5 Relevant customer experience and references

Reference A: Southern Rail Equipment Works (fictional), 700 users, supplier portal and RFQ workflows, live since 2019. Reference B: Pioneer Electrical Assemblies (fictional), 450 users, contract repository and approvals, live since 2021. Reference C: Delta Agro Machines (fictional), 300 users, supplier registration and sourcing, live since 2022. Orbit reports 14 procurement deployments overall; reference calls are available on request.

4. Closing Statement

Orbit Digital appreciates the opportunity to respond to RFP-2026-041. The statements in this proposal are submitted for evaluation against the buyer's requirements and are subject to contract, final design validation and mutually agreed acceptance criteria.
